ABOUT

Mechanical engineer working across **manufacturing, software and program management**. I design vehicle hardware, ship live AI systems, and lead a **19-member autonomous vehicle team**, and want to bring that mix to supply chain and operations.

EDUCATION

B.Tech, Mechanical Engineering	IIITDM Kurnool (Andhra Pradesh)	2023–2027
--------------------------------	---------------------------------	-----------

MAJOR PROJECTS

Limn – Agentic procurement marketplace for industrial tenders ([Live](#) | [Code](#)) Aug 2026 – Present

Solidity, Node.js, React, LLM integration

- Built a **multi-agent tender marketplace** to compress a **2–3 month manual procurement cycle into days**.
- Evaluated suppliers on **cost, specs and availability**, with sealed bidding, escrow settlement and reputation scoring.
- Enforced **buyer ceilings and seller floors** in a Solidity contract, so no agent can lift its own spending limit.
- Split raise, approve and pay across **three role-gated desks**, so no one account can both create and settle a request.
- Kept the LLM to text only; every figure comes from a deterministic engine, verified by **539 automated checks**.

Khata – Real-time claim verification for live sales calls ([Live](#) | [Code](#)) Aug 2026

Next.js, TypeScript, SQLite, LLM integration

- Built a co-pilot that checks claims made mid-call against a deterministic rules engine and returns a verdict in milliseconds.
- Left model advisory only. The rules engine decides what is true, & **324 automated checks** hold that boundary in place.

Navyam – Autonomous drone for industrial monitoring ([Drone Code](#) | [Sim Code](#)) Dec 2025 – Present

UAV Design, Python, ROS 2, PX4, Gazebo

- Lead an **8-member team** across airframe, propulsion and payload, managing mass and component placement.
- Gated hardware spend behind a **0.5m docking** milestone in Gazebo, then flew **20m × 20m** GPS-denied surveys.

INDUSTRIAL EXPOSURE

Industrial Visit & Study – Kia India Manufacturing Plant Anantapur, 2026

- Observed **automotive manufacturing, assembly-line workflows, production systems and mechanical integration**.

LEADERSHIP & MANAGEMENT

Project Navya, Autonomous Ground Vehicle (Project Lead) 2025 – Present

- Lead a **19-member team** across perception, controls, hardware and software, owning delivery end to end.
- Lead **chassis, steering and drive system** design, and integrate LiDAR, camera and IMU for field testing.
- Own sub-team interfaces and the **risk register**, and drive the roadmap and **go-to-market** plan toward a startup.

DataWorks Club – AI/ML & Data Science (Club Lead) Jan 2025 – Present

- Run workshops and hackathons reaching **600+ students**, owning the annual plan, budget, sponsors and core team.

Inter-IIIT Tech Meet, Udbhav, IIIT Sri City (Institute SPOC & Coordinator) Aug 2025

- Sole point of contact for a meet across **23 institutes**; ran the campus hackathon for **350 students**.

KEY SKILLS

- **Management** – Agile/Scrum, project planning, team coordination, Google Analytics, B2B marketing, entrepreneurship
- **Programming** – Python, SQL, TypeScript, JavaScript, Solidity, Node.js, React, Next.js, Git
- **AI & Agents** – LLM integration, prompt engineering, deterministic agent design, output verification, adversarial testing
- **Engineering** – CATIA, AutoCAD, GD&T, CNC programming, machining, quality inspection, DFM/DFA
- **Tools** – MS Excel, MS PowerPoint, MS Word, MATLAB, Simulink

ACHIEVEMENTS & CERTIFICATIONS

- **Winner, IBM SkillsBuild Hackathon South Region Finale**, Bengaluru, 2026: pitched Limen to **IBM judges** and placed in the **Top 4 of 25** finalist teams (4,000+ participants, 1000+ teams), qualifying for the National Finale.
- Selected for **Dolphin Tank India Founder Mentorship Program** (IAC, Cloud Counselage), Rs.18 lakh worth Mentorship.
- **Second Runner-Up**, KL University AI Build 2026 (1000+ students).
- **Agile & Scrum** (Alison, 84%), **Google Analytics for Beginners** (98.25%) and **MATLAB & Simscape Onramps**.
